Introduction

The Web has revolutionized the way the world communicates. InfoView harnesses the power of this medium by creating a full screen presentation window with web browser display capability. The administrator controls the location, sequence and duration of these web panels through a remote access interface. With InfoView, any PC instantly becomes a virtual billboard. Using the latest Plasma Flat Screen Television Technology, InfoView can present products demos, company information and vendor advertisements in a way that few other medias can match.

SmartCity® Compatibility & Integration

InfoView has been extensively tested and proved to be fully compatible with the SmartCity® infrastructure.

Advertising or Informational panels can be installed anywhere within the SmartCity® network and configured to display any kind of web-based applications and multi-media presentation pages. When a large number of InfoView panels is managed centrally, it is recommended to install a web server within the SmartCity® network in order to avoid data collection from the Internet.

InfoView's advanced cache features will restrict the continuous retrieval of remote presentations pages greatly reducing the usage of the network bandwidth without compromising any software's feature.

Applications

• Outdoor Advertising Panels

Bundled to a single or multiple outdoor screens, InfoView, will display advertisements in pre-configured daisy-chain order. System administrators will be able to configure the duration for each presentation page and keep track of the time each page has been displayed.

• Informational Kiosks

Usually bundled to kiosk hardware, InfoView, will be configured to display a central menu where the user, by touching the screen will be able to get the appropriate information. While in idle mode, the system may be configured to display an advertisement page.

• Airport or Stadium Panels

The only limit to the InfoView software is the panel that will be used to display the information. In places with a large audience, InfoView may be configured to retrieve live information from a central server and display advanced multi-media applications.

• Municipality Service Kiosks

In municipality networks, the InfoView will provide a unique tool for the administration of informational kiosks and centralize the information provided to the end user. Either in indoor or outdoor configuration, InfoView panels, can be organized in groups or individually and display specific content.

Questions & Answers

Can I use any type of electronic panel?

Yes. As far as there is a Windows screen driver for the panel.

Can the software be installed on a network drive?

Yes. The software may be installed on any 'visible' drive.

Can I combine information from two different sources simultaneously?

Yes. Using the banner feature, a small banner frame can be set up to deliver content from a separate web source at the same time that main content displays in the upper frame.

Can I use Macromedia Flash in my presentations?

Yes. InfoView fully supports Flash Enhanced Web Sites.

How cookies and other security issues are handled?

The InfoView will rely on Internet Explorer settings.

What are the browser-centric approach advantages?

The browser software creates the framework structure for other applications to run and interact with the user using the same browser standards. Proprietary kiosk software will establish a hierarchical relation with underlying applications without any industry established standards.

What is the difference between the InfoView approach to kiosk software and the competitors?

InfoView has a browser-centric approach to the kiosk software where third-party software will comply to integration standards. Traditional kiosk software will require a case-to-case third-party software integration.

Do I need to be connected to the Internet to use InfoView?

No. InfoView, like any web browser, can retrieve pages locally or on an Intranet. Internet access expands the capabilities of InfoView, but is not a requirement.

Is there a size limit for the presentations?

No. Keep in mind, however, larger presentations will increase the download time. You may wish to store larger presentations on the local machine or a server on the Intranet.

Will InfoView run on recent Windows versions?

Yes. The InfoView software will run on all recent Windows versions.

Pricing

The software is priced per terminal installed.
