Introduction

DTLink Inc. PayKiosk is a standalone software application running on a single computer providing Internet Access and Printing Services to mobile users in public places. The application will run on any recent Windows-based machine and will completely integrate to the SmartCity® environment.

PayKiosk is a browser-based terminal software that will lock down the computer and will allow usage through the iCard pre-paid card. Operators will be able to integrate the MS-Office applications and the NetSpooler software and thus provide a complete business center services.

SmartCity® Compatibility & Integration

PayKiosk has been extensively tested and proved to be fully compatible with the SmartCity® infrastructure.

The software can be bundled with secure terminals in many public places where the user will need an occasional Internet access. The user authentication and payment will be handled through the iCard pre-paid card like the rest of the Internet access services. PayKiosk terminals may be used by municipalities in schools and other educational centers where a strict access control is required.

PayKiosk Features

- **Advanced Web Filtering**
Control Web access at the browser level by defining the list of accessible sites in a central database. Organize the list of accessible sites in categories, and have the end-users limited only to those choices.

- **Completely Customizable**
Make the PayKiosk get the feel&look of your organization. Control every aspect of the user interface individually: branding, terminal lock-down, secure history control, popup windows management, color customization, download restriction, third party application restriction, idle presentation, toolbar menu, web-based email client, etc..

- **MS Office Integration**
The PayKiosk terminal software will provide a complete integration of the MS Office from within the browser and not as an external application. End users will be able to open/edit/save documents with the latest version of MS Word, Excel or Powerpoint. Operators will be able to restrict drives for accessing files and enhance terminal security.

- **Walled Garden**
System operators may define the list of sites that will be free-of-charge. Incorporated into the Favorite Sites feature, the 'Walled Garden' group of sites may be common to several terminals and updated centrally.

- **iCard Payment. Credit Card & PayPal Interface**
SmartCity® administrators will be able to even further automate the purchase of their customized iCard with the interfaces to the most popular payment methods like: Credit Card and PayPal, reaching more than 100 millions of users.

Questions & Answers

Can I use any type of electronic panel?

Yes. As far as there is a Windows screen driver for the panel.

Can the software be installed on a network drive?

Yes. The software may be installed on any 'visible' drive.

Can the user print to any attached printer?

Yes. The user will be able to print to any Windows printer configured on the terminal.

How can I customize the toolbar buttons and include my company logo?

In the images directory beneath the directory where you installed PayKiosk, are the following self explanatory images which you can replace with your own: Backward.gif, Forward.gif, Stop.gif, Refresh.gif, Print.gif, Help.gif, Options.gif, Exit.gif, logo.jpg

How cookies and other security issues are handled?

The PayKiosk will rely on Internet Explorer settings.

What are the browser-centric approach advantages?

The browser software creates the framework structure for other applications to run and interact with the user using the same browser standards. Proprietary kiosk software will establish a hierarchical relation with underlying applications without any industry established standards.

What is the difference between the PayKiosk approach to kiosk software and the competitors?

PayKiosk has a browser-centric approach to the kiosk software where third-party software will comply to integration standards. Traditional kiosk software will require a case-to-case third-party software integration.

What is the Active Filtering approach?

Most kiosk software will rely on centralized filtering modules and proxies. PayKiosk, through the Groups option will allow the navigation on only specific web pages.

Can you use the PayKiosk software for advertising?

No. You can use the InfoView software for advertising.

Will PayKiosk run on recent Windows versions?

Yes. The PayKiosk software will run on all recent Windows versions.

Pricing

The software is priced per kiosk installed.
